Murach's ASP.NET 4.6 Web Programming with C# 2015

Thank you for downloading and unzipping the files for *Murach's ASP.NET 4.6 Web Programming with C# 2015*. This download has been divided into two parts for faster downloading. The first part of the download contains the applications that are presented in the book. This part contains the exercise starts and solutions for the exercises at the end of each chapter in the book. For a description of all of the files that are included in these downloads, please refer to appendix A in the book.

This appendix also includes information on how to install Visual Studio 2015 and how to use the database for the book applications and exercises with either SQL Server 2014 Express LocalDB, which comes with Visual Studio, or SQL Server 2014 or 2016 Express, which you need to install separately. Finally, it includes information on how to set up IIS on your local computer in case you want to use it instead of IIS Express, which also comes with Visual Studio.
